

MOUNT CARMEL MOBILE MAMMOGRAPHY

Why Breast Cancer Screening Matters

Breast cancer remains one of the most significant health threats facing women today.

Each year in central Ohio, an estimated 100,000 women miss the breast cancer screenings that could save their lives.

The difference between early detection and delayed diagnosis can be the difference between a highly treatable condition and a life-threatening disease.

Too many women are missing recommended breast cancer screenings because of barriers like transportation challenges, inflexible work schedules, financial strain, and geographic isolation. The mobile coach directly removes those obstacles by bringing high quality, preventive care into the neighborhoods where women live and work.

ACCORDING TO NATIONAL STATISTICS:

316,000+

women are diagnosed with
invasive breast cancer each year

42,000+

women die from the
disease each year

1 in 8

women will develop invasive
breast cancer during their lifetime

90%

survival rate when
detected early

The Standard of Care

Today, advances in breast imaging technology have dramatically improved the ability to detect breast cancer earlier and more accurately.

The new Mobile Mammography Coach represents a transformational investment in state-of-the-art breast imaging technology and will deliver the highest standard of care.

The coach will feature:

- Advanced, three-dimensional breast imaging technology (3D mammography)
- Breast ultrasound services
- Comprehensive mobile breast imaging program serving all breast health needs

This combination of advanced 3D mammography and breast ultrasound represents the industry's leading approach to breast cancer screening and early detection.

health needs

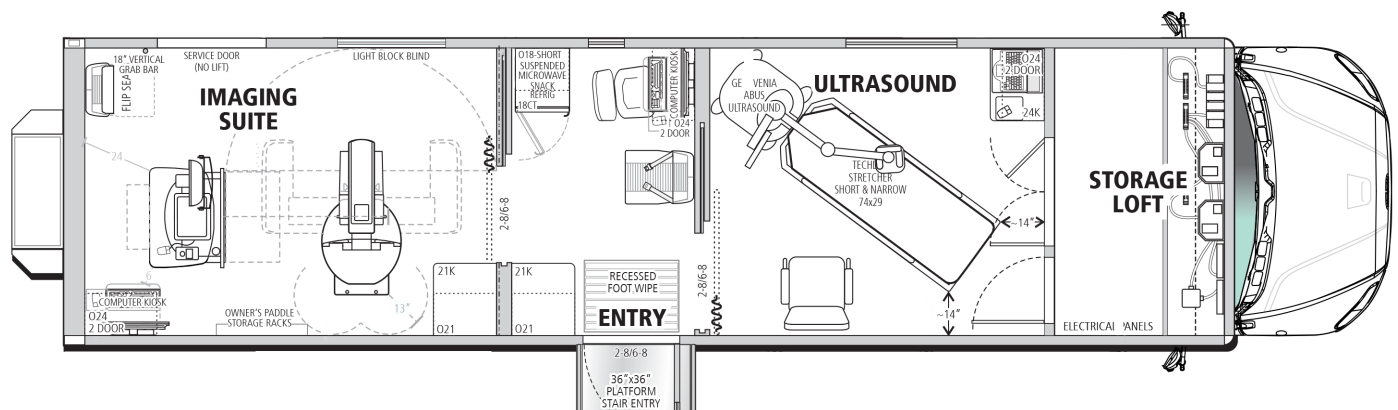

More Than a Mammogram

The Mobile Mammography Coach is designed to provide far more than a screening exam.

Women accessing the coach will receive:

- Screening mammography
- Breast health education
- Referral coordination
- Follow-up support
- Financial assistance resources when needed

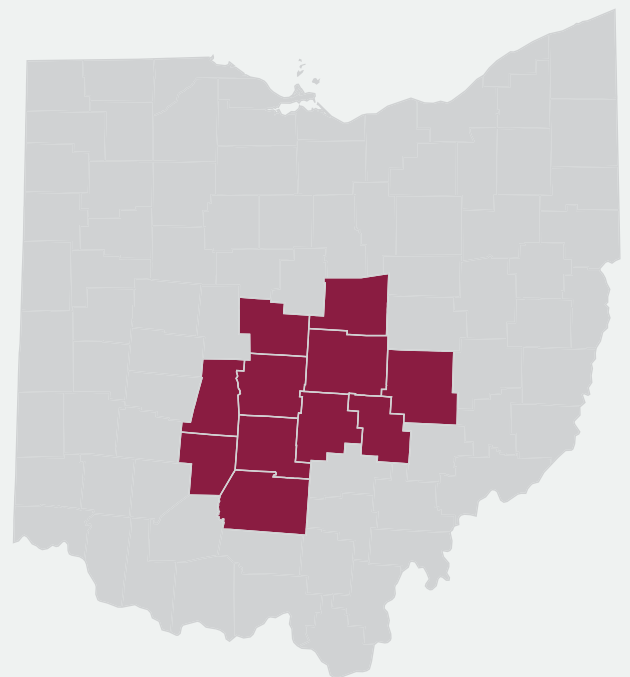

Patients needing additional support will be seamlessly connected to Mount Carmel experts for follow-up care. This approach helps ensure that every woman who enters the mobile coach has a path forward, regardless of insurance status, income level or personal circumstance.

Advancing Health Equity

The Mobile Mammography Coach directly supports Mount Carmel's Mission, vision and values, including our commitment to health equity. Focusing on neighborhoods across Franklin, Fairfield, Licking, Delaware, Madison and Pickaway counties where social vulnerability and access barriers are highest, the coach will bring preventive care directly to the women who most need it.

By meeting patients where they are — in their own communities, churches, workplaces, schools and partner organizations — the coach removes the obstacles that keep women from seeking screenings. Transportation challenges, time constraints, fear, cost and lack of access all fall away when care comes to them.

A Life-Saving Investment

Cancer does not wait for a convenient appointment. Neither should access to screening.

For so many women, a mammogram is more than a screening — it is the moment that changes everything. It is the reassurance they've been hoping for, or the early detection that gives them the chance to fight. When you invest in the Mobile Mammography Coach, you are investing in that moment. You are helping save lives long before cancer has the chance to take hold.

This is not just funding equipment. It is funding hope, access and dignity. It is ensuring that early detection is not a privilege, but a promise; one that reaches every woman, in every community we serve.

Because **early detection** changes lives.

Because **access** matters.

Because every woman deserves the opportunity for a **healthier future**.
